LiveSafe

Minimise risk of theft at the point of sale and detect counterfeit notes with the intelligent POS **LiveSafe**

- Market-leading counterfeit detection
- Decrease your spend on consumables
- Enhanced security at the checkout
- Reduce time spent on manual cash handling
- Advanced connectivity and integration options

The Tellermate LiveSafe would typically sit at your point of sale. It can easily be placed below or beside the cash drawer and integrated into existing furniture. The LiveSafe has several unique features that set it apart from traditional smart safes:

Enhanced Counterfeit Detection – Our spectral note reader analyses 4.8million data points, including texture, material, ink and more. This gives the LiveSafe some of the most advanced counterfeit detection capabilities in the market today.

Tamper Evident Cassettes – The LiveSafe stores cash deposits in tamper evident cassettes which store up to 1000 notes. These have a greater storage capacity compared to traditional single use bags and help deter internal theft due to the enhanced security features.

Remote Updates – Thanks to the enhanced connectivity available with the LiveSafe, software updates to accept new currency are carried out remotely and seamlessly, minimising the operational impact to your business.

Interface – Our unique interface allows you to access data about the contents of your LiveSafe, through your Tellermate Touch device. This enables you to navigate seamlessly between drawer and safe counts and increases efficiency.

Permission Based Access – The LiveSafe has multi-tier electronic security keys, allowing you to set access permissions. Each user is assigned a key which means you have a secure audit trail and accountability through your cash process.

Lower Your Carbon Footprint – In addition to the enhanced security, our cassettes are reuseable which removes the waste and cost of single use plastic bags. The additional capacity also reduces how often banking runs or CIT pickups need to be made.

Safe Sharing – LiveSafe has been developed to allow sharing between multiple POS' which reduces the cost and space requirement of our system.
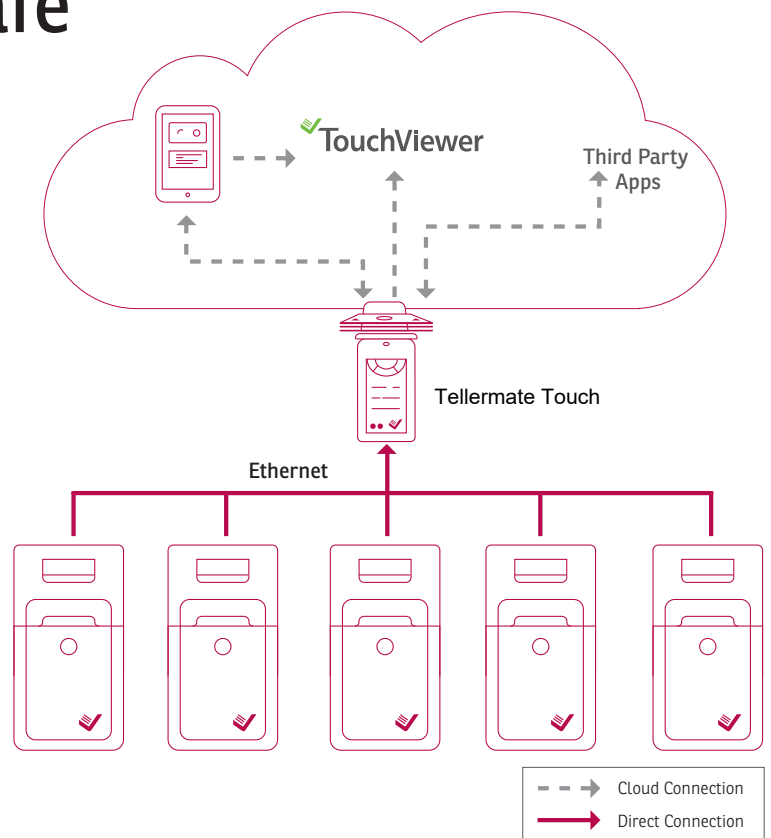

Low Maintenance – Our spectral note reader is expertly engineered to minimise maintenance requirements, and to maximise its lifespan.

LiveSafe

Getting more
from your smart safe

Smart Safes are often deployed 'back of house' for keeping cash secure. LiveSafe is a compact and flexible solution that delivers many of the benefits of traditional Smart Safes right at the point of sale.

Finding the best solution for your business can be difficult, yet Tellermate can help. As the inventors of weight-based cash counting technology, we know a thing or two about managing your cash effectively.

Our objective is to help you find the right cash management solution that delivers a compelling return on investment. If you would like to learn more about building a more effective cash management solution why not get in touch with us.

One of the connectivity possibilities of LiveSafe

Front line drawer skimming retail solution

Reduce shrinkage risks and cash loss at checkout by enabling instant deposit right after cash collection from the customer.

This minimises the amount of contact and handling required of your cash, and as a result LiveSafe helps ensure the secured removal of cash from the checkout to the back office.

The tamper evident cassettes act as a further deterrent to unauthorised cash handling and shrink.

Touch

The Tellermate Touch is excellent when paired with LiveSafe. Our integration allows you to use your Touch device as the interface for your LiveSafe. This enables you to count cash-drawers and LiveSafes seamlessly, and gives full visibility using our Touch Viewer software

LiveDrawer

The combination of transaction-by-transaction reconciliation which is offered by LiveDrawer, pairs perfectly with the increased security of LiveSafe. This creates an end-to-end cash management solution which is cost-effective, maximises security and increases productivity.

Specifications

- **Banknote processing:** 1 note per second
- **Capacity:** Up to 1000 notes
- **Metal Casing:** 3mm Steel
- **Connections:** USB A, USB B, Ethernet
- **Currencies:** Over 30 available
- **Optional configurations:** Front/Top Loading; Bag/Cassette Storage
- **Weight:** 14.2kg
- **Dimensions:** 180 x 340 x 340mm (W x L x H)
